Experience

Lead Frontend Intern | [CtrlB](#)

June 22, 2024 – January 22, 2025

- Solely led frontend development in a **fast-paced startup environment**
- **Restructured the entire frontend folder architecture**, implement **ESLint**, enhancing code scalability, maintainability, and developer onboarding efficiency.
- Enhanced the **Logs UI**, improving clarity and accessibility for log data visualization on the frontend.
- **Gained deep insights** into **observability** practices, understanding how **logs**, **metrics**, and **traces** contribute to system reliability and performance monitoring.

FullStack Engineering Intern | [AnapanAI](#)

May 22, 2025 – July 31, 2025

- Integrated the **MCP** system via **Zapier** into the **chatbot flow** to automate email sends, pull **presentation-data** and support **meeting-prep**.
- Built and **revamped UI components** for key modules like **Opportunities** and **Accounts**, improving usability and visual consistency
- Used the **Mastra** platform and built **AI agent tools** to assist users with sales insights and internal knowledge retrieval

Projects

PiperChat [Demo](#) | [Github](#)

- Used technologies like **Node**, **MongoDB**, **SocketIO**, and **React** to build **DISCORD CLONE** from scratch.
- Developed features like **Create Servers** and **Create Channels**, allowing users to create and manage their chat servers.
- Designed and implemented backend APIs (Express/MongoDB) for **auth**, **servers**, **channels**, **invites**, **friends**, and **chat history**.
- Built real-time features with **Socket.IO**: event handling, and message delivery.
- Developed React UI with Redux ; integrated **JWT auth** and protected routes.
- Implemented email **OTP verification** using **Nodemailer** with **Gmail OAuth2**.

VotingApp [Demo](#) | [Github](#)

- Built a Secure **Online Voting System** using **Node.js**, **Express**, **MongoDB (Mongoose)**, **Redis**, and **Socket.IO**.
- Developed user authentication with **JWT** and **bcrypt** for password hashing; implemented **Aadhaar-based signup/login** and role-based access control (admins manage candidates, voters can cast one vote).
- Designed and implemented **RESTful APIs** for candidate management, voting, **vote counts**, **election results**, and user profiles (excluding sensitive fields).
- Enabled **real-time vote updates** using **Socket.IO**, audit-ready records, and data integrity with **one-vote-per-user** logic.

Mern Auth [Demo](#) | [Github](#)

- Utilized **JSON Web Tokens (JWT)** for secure user authentication enhancing the overall security of the application.
- Integrated **MongoDB** as the database to store users securely.
- Designed and implemented **RESTful APIs** for user registration, login, and other authentication-related functionalities.

Reactron [Demo](#) | [Github](#)

- This is a web **BLOG APPLICATION** with a custom backend.
- Created a custom backend using **Node and Express**, optimizing performance and security.
- Implemented **CRUD** operations for users, allowing them to update their profile settings, change passwords, and delete their accounts securely.

Skills

Proficient in: JavaScript.

Familiar with: Java, Python, C , Go.

Frameworks/Libraries: React.js, Express.js, Next.js, Redux, Bootstrap, Tailwind CSS, Vite, HTML, CSS.

Tools/Software: Node.js, Firebase, Git, GitHub, VS Code, Mastra, Supabase, Zapier, Postman, OpenAI API.

Databases: MongoDB, Redis.

Education

Bachelor of Computer Applications, Guru Nanak Dev University

A 2026(Expected)

CGPA: 7.8
